

RETURNJI

Product Requirements & Business Documentation

Version 1.0

1. Executive Summary

Returnji is a QR-based lost-and-found platform that helps people recover lost belongings quickly, securely, and conveniently.

Users attach a Returnji QR sticker, keychain, or tag to their belongings. The QR is activated by the user after purchase and linked to their account. If the item is lost, anyone who finds it can scan the QR code and follow guided steps to help return the item to its owner.

Returnji aims to create a nationwide recovery network where lost items can be returned with minimal effort and maximum privacy.

2. Problem Statement

Every day, people lose:

- Luggage
- Wallets
- Keys
- Bags
- Electronics
- Water bottles
- College belongings
- Office equipment

Most lost items never return because:

- The finder cannot identify the owner.
 - There is no easy contact method.
 - Owners have no way to track recovery.
 - Returning items is often inconvenient.
-

3. Solution

Returnji provides a unique QR identity for belongings.

When a lost item is found:

1. Finder scans QR.
2. Returnji identifies the registered owner.
3. Finder receives return instructions.
4. Owner gets notified.
5. Return can happen directly or through delivery partners.

This creates a secure and scalable item recovery system.

4. Vision

To become India's largest smart lost-and-found ecosystem and make losing belongings a temporary inconvenience rather than a permanent loss.

5. Mission

To simplify the recovery of lost belongings through QR technology, digital identity, and logistics support.

6. Target Customers

Primary

- Students
- Travelers
- Professionals
- Families

Secondary

- Schools
 - Colleges
 - Corporates
 - Hotels
 - Event organizers
-

7. Products

QR Stickers

Small stickers for:

- Laptops
- Water bottles
- Phones
- Books
- Wallets

QR Keychains

For:

- Keys
- Vehicle keys
- Backpacks

QR Luggage Tags

For:

- Travel bags
 - Suitcases
 - Trolleys
-

8. New Returnji QR Workflow

Step 1: QR Manufacturing

Returnji generates thousands of unique QR IDs.

Examples:

QR001 QR002 QR003

Each QR is:

- Stored in database
- Marked as Unclaimed

QRs are printed on merchandise before sale.

Step 2: User Activation

User purchases product.

User scans QR.

System checks:

Status = Unclaimed

User sees registration page.

Required fields:

- Name
- Phone Number
- Email (Optional)
- Address
- Emergency Contact (Optional)

User clicks:

"Claim This QR"

System links QR ID with owner profile.

Status changes to:

Claimed

Step 3: Lost Item

Item gets lost.

Finder scans QR.

System checks:

Status = Claimed

Finder sees Returnji recovery page.

Step 4: Return Process

Finder can:

- Contact Owner
- Send Return Message
- Request Pickup

Owner receives notification.

Returnji facilitates recovery.

9. User Roles

Owner

Can:

- Register QR
- Update Profile
- Manage Items
- View Scan History
- Receive Notifications

Finder

Can:

- Scan QR
- Contact Owner
- Submit Return Request
- Request Pickup

Admin

Can:

- Manage Users
 - Manage QR Inventory
 - Monitor Recoveries
 - Manage Orders
 - Manage Deliveries
-

10. Platform Features

User Features

- QR Registration
- Item Dashboard
- Profile Management
- Scan Alerts
- Return Requests
- Delivery Tracking

Admin Features

- User Management
 - QR Inventory Management
 - Product Management
 - Order Management
 - Recovery Analytics
-

11. Database Structure

Users

Fields:

- User ID
- Name
- Phone
- Email
- Address
- Created Date

QR Codes

Fields:

- QR ID
- Status
- User ID
- Activation Date

Status Values:

- Unclaimed

- Claimed
- Disabled

Return Requests

Fields:

- Request ID
- QR ID
- Finder Contact
- Status
- Created Date

Status:

- Open
 - Accepted
 - In Transit
 - Delivered
 - Closed
-

12. Website Pages

Public

14. Revenue Model

Product Sales

- QR Stickers
- QR Keychains
- QR Tags

Premium Membership

Benefits:

- Multiple Item Management
- Priority Recovery Support

- Extended Scan History

Delivery Commission

Fee collected on successful return deliveries.

Enterprise Packages

For:

- Schools
 - Colleges
 - Corporates
 - Travel Companies
-

15. Technology Stack

Frontend:

- Flutter
- Android Studio

Backend:

- Node.js
- Express.js

Database:

- Firebase Firestore or
- MongoDB

Authentication:

- Firebase Auth

Notifications:

- Firebase Cloud Messaging

Hosting:

- Firebase Hosting or

- AWS
-

16. Future Features

Phase 2:

- Anonymous Chat
- OTP Verification
- Multi-Item Dashboard
- GPS Assisted Recovery

Phase 3:

- AI Recovery Assistant
 - International Shipping Integration
 - Corporate Asset Tracking
 - Smart NFC Tags
-

17. Success Metrics

KPIs:

- Registered Users
 - Active QR Codes
 - Items Recovered
 - Recovery Rate
 - Revenue
 - Customer Retention
-

18. Startup Goal

Build India's most trusted lost-and-found recovery platform using smart QR technology and logistics support.

Tagline:

"Because Lost Doesn't Have To Mean Gone."
